## Report 1918-20 With the Supplement to the Guide to the Experimental Plots Containing the Yields per Acre Etc.

[Full Table of Content](#)

### General Agricultural Problems Lvi-lxi

#### Rothamsted Research

Rothamsted Research (1921) *General Agricultural Problems Lvi-lxi ; Report 1918-20 With The Supplement To The Guide To The Experimental Plots Containing The Yields Per Acre Etc.*, pp 59 - 59  
- DOI: <https://doi.org/10.23637/ERADOC-1-109>

The method of procedure is to analyse the soil population by examination of the plant or of the soil and so to determine what organism or organisms it is desired to suppress. An investigation is then made of the effect of a typical poison (*e.g.*, carbolic acid) on the organism; derivatives are systematically prepared, and the more toxic are followed up. In this way it has been possible greatly to intensify some of the soil sterilisers previously suggested for horticultural use; *e.g.*, carbolic acid becomes three to five times more effective by chlorination.

(Note.—This work is carried out by the W. B. Randall assistant, and full details for nurserymen are published in the Reports of the Nursery and Market Garden Experiment Station, Cheshunt, Herts.)
