Area of each gauge 1000th acre.

### CROP YIELDS ON THE EXPERIMENTAL PLOTS.

Notes.—In each case the year refers to the harvest, e.g., Wheat harvested in 1924. In the tables, total straw includes straw, cavings and chaff.

### CONVERSION TABLE.

| 1 acre = 1 bushel (Imperial) = 1 lb. (pound avoirdupois) = |                               | •••  | 0.963 Feddan.<br>0.184 Ardeb.<br>1.009 Rotls. |
|--|-------------------------------|------|---|
| 1 cwt. (hundredweight) =                                   | 50.8 Kilogrammes              |      | 113.0 Rotls.<br>1.366 Maunds.                 |
| 1 metric quintal =   | (100.0 Kilogrammes (220.46 lb |      | •   |
| 1 bushel per acre =  | 0.9 Hectolitre per Hectare    |      | 0.191 Ardeb per Feddan.                       |
| 1 lb. per acre =   | 1.12 Kilogramme per Hectare   |      | 1.049 Rotls per Feddan.                       |
| 1 cwt. per acre =  | 125 60 Kilogrammes per Hectar |      | 117'4 Rotls per Feddan.                       |
|  | 1.256 metric Quintals per Hec | tare | 1   |

In America the Winchester bushel is used = 35'236 litres. 1 English bushel = 1'032 American bushels.

| 12        | 13  | 14  |         | 15   |       | 16  |               | 17          | 11  |             | 18   |   |            | 19  |   | 20   |   |  |

Ground lime was applied to the Southern portion (limed) of the plots at the rate of 2,000 lb. to the acre in the Winter of 1903-4, 1907-8, 1915-16, 1923-24, and at the rate of 2,500 lb. to the acre in the Winter of 1920-21, except where otherwise stated.

Up to 1914 the limed and unlimed plot results were not separately given in the Annual Report, but the mean of the two was given. From 1915 onwards the separate figures are given.

The 2nd Hay Crop, 1923, was carted in very bad condition as the plots could only be cut when the t was on them. The Dry Matter figures give a truer indication of the relative yields of the frost was on them. different plots.

The Park Grass Plots.

Notes.—Since 1919 the manure for each plot (except of series A and B) has been rationed at 40 lb. Nitrogen, 100 lb. Calcium Phosphate and 50 lb. Potash per acre. Each plot has been supplied with as much of its particular manure (shoddy, guano, &c.) as possible without exceeding the receipt in any of the three rationed ingredients. Any deficit in either of these three has then been made good by adding the necessary quantity of Sulphate of Ammonia. Superphosphate, or Sulphate of Potash. No manure was applied for 1923 crop. Figures in italics denote unmanured plots. The yields on the plots to which the manure was applied in a given season are printed in heavy type.
