## CROP YIELDS ON THE EXPERIMENTAL PLOTS.

NOTES.—In each case the year refers to the harvest, *e.g.*, Wheat 1929 means wheat harvested in 1929. In the tables, total straw includes straw, cavings and chaff. These were weighed separately prior to 1928. Since 1928 the figure given as total straw has been arrived at as the difference : total sheaf weight—weight of grain.

CONVERSION TABLE.

† Excluding 1885, when Nitrogenous Fertilisers were not applied, owing to poor crop, and 1908 and 1927 when the crop was swedes.

\*\* 23 years only, 1904-1928.

Ground Lime was applied to the southern portion (Limed) of the plots at the rate of 2000 lb. to the acre in the Winters of 1903-4, 1907-8, 1915-16, 1923-24, 1927-28, and at the rate of 2500 lb. to the acre in the Winter of 1920-21, except where otherwise stated.

Up to 1914 the Limed and Unlimed plot results were not separately given in the Annual Report, but the mean of the two was given. From 1915 onwards the separate figures are given.

† The second crop was carted green; the figures given are estimated hay yields, calculated from the dry matter.

Sulphate of Ammonia is applied as to one-third in Autumn and two-thirds in Spring, except for plot 15. Nitrate of Soda is all given in Spring, there being two applications at an interval of a month on Plot 16. In 1926 and 1927 the crop was confined to the lower (eastern) part of the field, the upper part being completely fallowed for 2 years. This was the first complete fallow on this area since the experiment began in 1843. In October, 1927, the upper or western part was sown with wheat, and again in 1928, the yields for 1929 being given above.

The field this year was sown across by the half-drill strip method in wide spaced drills to facilitate cleaning operations. Total sheaf weight only was taken and the Grain/Straw ratio determined in samples; Grain and Straw per acre being determined from this ratio. The sample for Plot 4AA (Plumage Archer) was lost, and the figures given in heavy type are derived from the (logarithmic) average Grain/Straw ratio for the seven remaining Plots in Series AA and AAS.
