Continuous Rotation Experiments

Rothamsted Research

Rothamsted Research (1935) *Continuous Rotation Experiments* ; Report For 1934, pp 163 - 180 -
DOI: <https://doi.org/10.23637/ERADOC-1-66>

FOUR COURSE ROTATION EXPERIMENT, ROTHAMSTED

RESIDUAL VALUES OF HUMIC AND PHOSPHATIC FERTILISERS For details, see 1932 Report, p. 127

MANURES APPLIED, SEASON 1933-4

Treatment.	Organic Fertilisers (cwt. per acre)				Additional Artificial Fertilisers (cwt. per acre).		
	Organic Matter.	N.	K ₂ O	P ₂ O ₅	N. as S. of A.	K ₂ O as Mur. Pot.	P ₂ O ₅ as Super.
1	50 (as F.Y.M.)	1.364	1.659	0.944	0.436	1.341	0.256
2	50 (as Adco)	1.717	0.687	1.454†	0.083	2.313	None†
3	150.23 (as straw)	0.989	2.637	0.390	0.811	0.363	0.810
4		None			0.36	0.6	1.2
5		None			0.36	0.6	1.2*

* As mineral phosphate.

† The weight of P₂O₅ in the Adco given per acre exceeded the limit of 1.2 cwt., so that no superphosphate had to be added.

CULTIVATIONS, ETC.

	Barley.	Seeds.	Potatoes.	Wheat.
Variety	Plumage Archer	Italian ryegrass and commercial white clover.	Ally	Yeoman
Date of Sowing ..	March 26	April 29	April 17	Oct. 23
Manures applied—				
Dung and Adco ..	Oct. 30	Oct. 30	Oct. 30	Oct. 16
Artificials to Adco ..	Oct. 30			
and Dung	Oct. 30			
Straw	Oct. 30	Oct. 30, Dec. 18, April 5	Oct. 30, Oct. 30	Oct. 16, Oct. 16
Artificials to straw ..	Oct. 30, Dec. 18, March 15	Oct. 30, Dec. 18, April 5	Oct. 30, Dec. 18, April 17	Oct. 16, Dec. 18, April 6
Treatments 4 and 5	March 15	April 5	April 17	Oct. 24, April 6
Date of harvesting ..	Aug. 13-16	June 28	Oct. 10	Aug. 8
Previous crop	Potatoes	Barley	Wheat	Seeds hay
Cultivations—				
Ploughing	Nov. 2-6		Nov. 2-6	June 23-30, Oct. 17 and 18
Harrowing	March 26 and 27	April 29	April 13, May 19	Oct. 23 and 24, April 7, April 10
Rolling	April 10			
Hoing			May 17	
Ridging			April 16, June 15, July 10	
Grubbing			May 25, June 8, July 2	

PLAN AND YIELDS

Clover Hay—AH, plots 1-25
Yields in lb., green weights

Wheat—AW, plots 26-50
Yields in lb., grain above, straw below

SUMMARY OF RESULTS, 1934

Manure.	Year of Cycle.	Wheat. Cwt. per Acre.		Potatoes, tons per acre.	Barley. Cwt. per Acre.		Seeds Hay. Cwt. per acre dry matter.
		Grain.	Straw.		Grain.	Straw.	
Manure as F.Y.M.	I	32.4	40.5	5.49	31.6	32.2	19.8
	II	25.1	30.9	4.40	25.6	27.2	10.0
	III	22.4	26.5	2.64	23.2	27.5	11.8
	IV	24.0	28.7	2.92	19.5	20.7	7.4
	V	23.8	26.6	2.59	21.8	22.9	8.9
Manure as Adco	I	31.1	38.1	2.75	24.2	24.7	16.9
	II	27.7	32.8	3.85	23.6	26.9	7.2
	III	18.3	20.9	2.84	23.4	25.5	8.6
	IV	23.3	26.4	3.09	20.5	25.4	7.7
	V	24.7	28.5	2.38	26.0	26.1	12.1
Manure as Straw	I	29.5	35.6	5.02	30.0	28.4	6.0
	II	22.9	29.1	2.38	25.7	26.9	3.7
	III	28.7	34.4	4.00	24.1	24.9	14.0
	IV	21.8	26.2	3.46	25.5	27.4	9.7
	V	25.3	29.9	4.24	26.3	26.0	8.0
Super.	I	23.6	28.9	5.27	26.4	26.2	15.8
	II	29.2	36.4	3.82	27.2	24.9	16.9
	III	23.9	28.7	4.57	25.4	28.1	14.6
	IV	24.8	30.0	4.03	26.4	27.6	15.2
	V	25.5	31.0	5.34	24.9	25.1	13.7
Rock Phosphate	I	23.3	28.1	3.58	21.7	23.0	9.2
	II	23.2	27.9	3.73	21.4	22.2	16.1
	III	24.2	28.1	4.01	19.9	26.8	14.9
	IV	26.6	32.9	3.58	23.6	28.4	14.6
	V	26.1	32.0	2.82	25.9	30.2	15.5

The number I denotes application of manure at the beginning of the present season (1933-4)
 II application in the previous season, etc.

SIX COURSE ROTATION EXPERIMENT

SEASONAL EFFECTS OF N, P₂O₅, K₂O

(For details see 1932 Report, p. 131)

CULTIVATIONS, ETC.—ROTHAMSTED

	Sugar Beet.	Barley.	Clover Hay.	Wheat.	Potatoes.	Rye
Variety	Kuhn	Plumage Archer	Broad Red	Yeoman	Ally	
Date of Sowing	May 5	March 26	April 27	Oct. 18	April 18	Oct. 16
Manures applied	April 28	March 8	Oct. 28, April 5	Oct. 18, April 6	April 17	Oct. 16, April 6
Date of harvest- ing	Nov. 27 and 28	Aug. 11	June 28	Aug. 3	Oct. 11	July 27
Previous crop	Forage	Sugar beet	Barley	Clover	Wheat	Potatoes
Cultivations— Ploughing	June 22, Sept. 15, Feb. 23	Nov. 27		Oct. 6 and 7	Sept. 14, Feb. 24	Oct. 9,
Harrowing	June 24, Sept. 28 May 2 and 5	Mar. 9 and 26		Oct. 18	Sept. 28, April 13 May 19	Oct. 16, April 14
Rolling	June 24, May 4, 5 and 11	April 10		April 10		
Singling	June 15, 16					
Hoeing	May 28, June 5 July 6 and 20			May 22	May 22, June 9	May 22
Ridging					April 16, June 15, July 10	
Grubbing					May 25, July 3	

CULTIVATIONS, Etc.—WOBURN

	Sugar Beet.	Barley.	Clover Hay.	Wheat.	Potatoes.	Rye
Variety	Kuhn	Plumage Archer	Broad Red	Yeoman	Ally	
Date of sowing	April 27	March 9	May 12	Oct. 23	April 23	Oct. 23
Manures applied	April 27	March 9	Oct. 23, March 6	Oct. 23, March 7	April 20	Oct. 23, March 7
Date of harvest	Nov. 13	July 24	Crop failed	Aug. 16	Oct. 2	July 25
Previous crop	Forage	Sugar beet	Barley	Clover	Wheat	Potatoes
Cultivations— Ploughing	Aug. 1, Oct. 1-3, Oct. 17, Feb. 13	Jan. 30		Aug. 2, Oct. 3 and 4	Aug. 22, Oct. 1-3, Feb. 12	Oct. 3 and 4
Harrowing	Aug. 1 and 23, Oct. 17 and 23, April 12 and 27	March 9, April 23, May 1	May 12	Oct. 17, 23, April 12 and 23, May 2 and 14	Oct. 17 and 23, April 12, May 2, 14 and 23	Oct. 17 and 23, April 12 and 23
Rolling	Aug. 1, April 3 and 23, May 4	Mar. 9, May 2		Aug. 2, March 9, May 4	April 3	March 6
Singling Hoeing	June 20 May 14, June 1, 11 and 23, Aug. 18 and 19			April 23	May 31, June 11	
Ridging					April 19, May 7, 16, June 29	

ROTHAMSTED, 1934

Sugar beet—BS, Plots 1-15.
Yields in lb., roots (dirty) above, tops centre, sugar percentage below.

*Rye, not ryegrass as stated in last year's Report, was the green manure crop grown in 1932-3.
 †All plots receiving Adco in the season 1933-4 were given 0.5 cwt. K₂O per acre in excess of the proper dressing.

LONG PERIOD CULTIVATION EXPERIMENT

Long Hoos V

Begun Autumn, 1933

Objects.

- (a) To compare the effects of continued ploughing, rotary cultivation with the Simar implement ("simaring") and stirring the soil with a cultivator ("cultivating") on crop yield and weed-infestation.
- (b) To investigate the value of cyanamide as a weed-killer.

Crop rotation. The following three crops are grown in rotation : wheat, mangolds, barley.

Treatments and arrangement (see plan).

All combinations of—

$\left\{ \begin{array}{l} \text{Ploughing (P)} \\ \text{Simaring (S)} \\ \text{Cultivating (C)} \end{array} \right\} \times \left\{ \begin{array}{l} \text{Deep cultivation (8 ins.) (D)} \\ \text{Shallow cultivation (4 ins.) (Sh)} \end{array} \right\} \times \left\{ \begin{array}{l} \text{Cyanamide (Cy)} \\ \text{Nitro-chalk (N)} \end{array} \right\}$

For each crop there are four blocks carrying these twelve treatments.

On two of the four blocks (labelled C on the plan) under each crop, the treatments are continued on the same plots in successive years. On the remaining two (labelled A and B on the plan) a cycle of cultivations and manuring is adopted. The object of this arrangement is to provide a standard of "direct" cultivation effects, for comparing cumulative effects of the "continuous" cultivations.

The cultivation cycles are :

- (A) Ploughing, simaring, cultivating.
 - (B) Ploughing, cultivating, simaring.
- Deep and shallow cultivations alternate in successive years.
Cyanamide and nitro-chalk alternate in two-yearly periods.
Area of each plot : 1/65 acre (139.8 lks. x 11 lks.)
There are 4 rows of mangolds per plot spaced 22 inches apart.

Times of Cultivation.

Wheat. All cultivations in autumn.
Barley. Ploughed and cultivated in autumn and again in spring. Simared in spring.
Mangolds. All cultivations in spring.

Subsidiary non-experimental cultivations.

The land is harrowed after applying fertilisers (except after top-dressing wheat where harrowing is optional), and after drilling the seed.

In 1933, half of each simared plot of the wheat break was rolled after sowing.

Application of fertilisers.

Wheat. N (as cyanamide or nitro-chalk) applied at the rate of 0.3 cwt. per acre as a spring top-dressing.

Barley. N (as cyanamide or nitro-chalk) applied at the rate of 0.2 cwt. per acre, at least one week before sowing.

Mangolds. N (as cyanamide or nitro-chalk) applied at the rate of 0.6 cwt. per acre. A basal dressing of P_2O_5 (as superphosphate) at the rate of 0.75 cwt. per acre, and K_2O (as muriate of potash) at the rate of 1.0 cwt. per acre is given to all plots. Cyanamide, superphosphate and muriate of potash are applied, at least one week before sowing. Nitro-chalk is applied half one week before sowing and half at singling.

Conclusions

For wheat and barley, the yields of grain and straw were significantly higher with deep cultivation than with shallow, the increases in cwt. per acre being wheat grain 1.6, straw 2.0, barley grain 1.1, straw 0.8. For mangolds there was little difference in the roots, but shallow cultivation gave a significantly higher yield of tops.

In the case of wheat, both grain and straw, and mangolds, roots only, simaring gave significantly lower yields than ploughing and cultivating. Ploughing gave somewhat higher yields than cultivating in the case of wheat, the difference being almost significant for the wheat straw. There was little difference between ploughing and cultivating in the case of mangold roots or of any of the three methods of cultivation in the tops. In the case of barley the results were similar to those for wheat as far as the shallow cultivations are concerned, but with deep cultivations simaring has actually yielded higher (significantly so in the case of the grain) than ploughing or cultivating.

There was no indication of any difference in the effects of nitro-chalk and cyanamide, except in the case of wheat straw, in which the nitro-chalk gave a slight, though not significant, increase.

In the case of wheat grain, the second order interaction was significant.
