## Rothamsted Insect Survey

### Sixth Annual Summary

L. R. TAYLOR and R. A. FRENCH

#### Suction traps

Samples were collected daily from 1 April to 3 November 1974 and aphid bulletins issued weekly from 7 April 1974 (Bulletin No. 1) to 3 November 1974 (Bulletin No. 31). The 32 aphid taxa listed in Table 1(a-h) are those in the Bulletin and are the same as 1972 and 1973.

The trap at Building Research Station, Garston, and two traps at Rothamsted Farm were discontinued. New traps started operating at Lancashire College of Agriculture, Preston, on 29 April 1974 and at the West of Scotland Agricultural College, Auchincruive, Ayr, on 30 August 1974. The records for the trap at Ayr (also for a 4-ft trap at Rothamsted) do not appear in the Bulletins or in Table 1 a-f.

Samples from Zeeland, Broom's Barn and Aberystwyth were mainly identified at the site by D. Hille Ris Lambers of Bladluisonderzoek T.N.O., G. D. Heathcote of Broom's Barn and J. A'Brook of the Welsh Plant Breeding Station respectively. H. L. G. Stroyan of MAFF Plant Pathology Laboratories and V. F. Eastop of the British Museum (Natural History) confirmed difficult determinations.

The Bulletins cover the working week, Monday to Sunday. Table 1 is for standard four-week periods, constant from year to year (see *Rothamsted Report for 1972*, Part 2, p. 211, Table 4).

The Bulletin, sent out each Friday, lists aphids caught between 5 and 12 days previously, except Zeeland and Copenhagen which appear a week later. This timing is determined by the postal service.

The sample volumes were halved at Rainham and Wye from 11 June to 22 July, and at Silwood, Long Ashton, Shardlow, Preston and Hereford from 24 June to 22 July 1974. Figures in the bulletins and tables are corrected to full volume sample.

In Table 1 there are no missing values; a blank records a zero catch.

#### Light traps

Table 2(a-f) gives the annual catches during 1972 and 1973 of the same pest, or migratory, Lepidoptera as in previous years. The addition of 23 new sites makes a total of 88 in the Table. At the end of 1974, 160 traps are operating.

The sites in Table 2 are arranged in sequence from north to south and the species are in the same order as in previous years. Zero catches are recorded as 0; dashes indicate no record.

Voluntary workers again operated most traps and identified many of the insects; for this we are most grateful.

Table 1(a-h) see pages 202-217.

Table 2(a-f) see pages 218-229.
