Rothamsted Experimental Station Report for 1981 Part 2

[Full Table of Content](#)

Rothamsted Insect Survey Thirteenth Annual Summary

L. R. Taylor, E. D. M. Macaulay, Maureen J. Dupuch and Joan Nicklen

L. R. Taylor, E. D. M. Macaulay, Maureen J. Dupuch and Joan Nicklen (1982) *Rothamsted Insect Survey Thirteenth Annual Summary*; Rothamsted Experimental Station Report For 1981 Part 2, pp 129 - 157 - DOI: <https://doi.org/10.23637/ERADOC-1-34190>

Rothamsted Insect Survey
Thirteenth Annual Summary

L. R. TAYLOR, E. D. M. MACAULAY, MAUREEN J. DUPUCH and JOAN NICKLEN

Suction traps 1981

Daily samples were collected from 6 April to 4 November 1981 and the *Aphid Bulletins* were issued weekly from 6 April (*Bulletin* No. 1) to 1 November (*Bulletin* No. 30). The 33 aphid taxa listed in Table 1 (a-h) are those in the *Aphid Bulletin*.

From 6 April 1981 Dr L. A. D. Turl and colleagues at the Department of Agriculture and Fisheries for Scotland (DAFS) East Craigs took over responsibility for the traps at Elgin, Dundee, East Cragis, Pathhead, Ayr and Stirling.

In 1981 records for the trap at Pathhead in Scotland appeared on the *Bulletin* and in Table 1 (a-h). The trap at Rainham was only operating from 30 March until the end of July; it only appears on the *Bulletins* until the end of June and in Tables 1 (a-d). Traps in Holland, operated by Dr A. van Harten of Wageningen, continued during 1981, but records do not appear on the *Bulletins* nor in Table 1. A trap was also operating at Stirling in Scotland. Suction traps sampling at 5 ft (1.5 m) were operating at East Craigs, Ingraston, Broom's Barn (until 1 June only), Hereford and Rothamsted Tower; records for these do not appear in *Bulletins* nor in Table 1.

Catches from Aberystwyth were identified by Mr J. A'Brook and Mr H. Evans of the Welsh Plant Breeding Station; Dr G. D. Heathcote of Broom's Barn Experimental Station identified aphids from Broom's Barn. The catches from the Scottish traps were identified by Dr L. A. D. Turl, Dr D. A. Cooper, Mr D. B. Cole and Mr R. Burns of DAFS, East Craigs. Dr H. L. G. Stroyan of the Ministry of Agriculture, Fisheries and Food, Plant Pathology Laboratory confirmed difficult identifications.

The *Bulletin*, despatched each Friday, lists aphids caught between 5 and 12 days earlier. This timing is dictated by the postal services.

The *Bulletins* cover the working week Monday to Sunday. Table 1 is for standard 4-week periods constant from year to year (see *Rothamsted Report for 1972*, Part 2, 211, Table 4).

Sample volumes were halved at various sites as follows: Rothamsted Tower from 13 July–5 October, Preston, Kirton, Shardlow, Hereford, Writtle, Long Ashton and Silwood from 14 July to 12 October, Wye 15 July–12 October, Starcross from 6 August to 5 October, Broom's Barn from 17 August to 2 September. In addition, when numbers were high, catches were sub-sampled in the laboratory to reduce the pressure of work. The weekly *Bulletins* and Table 1 (a-h) are corrected to full volume samples.

In Table 1 (a-h) there are no missing values, a blank records a zero catch.

Light traps

Table 2 (a-f) gives the annual catches during 1979 and 1980 of the same pest, or migratory Lepidoptera as in previous years.

Eighty-two sites completed the 364-day sample for 1980.

The sites in Table 2 are arranged in sequence from north to south and the species are in the same order as in previous years. Zero catches are recorded as 0; dashes indicate missing records.

Once again voluntary workers operated most of the traps and identified many of the insects; we are most grateful for their help.
