Nitrophosphates placement - Highfield 3 1952.

System of replication: 4 randomized blocks of 6 plots each.

Area of each plot (average): 0.0143 acre.

Treatments: Nitrochalk at 0.5 cwt N per acre broadcast (two plots per block), and all combinations of:-

Manures: Nitrophosphate (British) 13.9% N, 14.6% P<sub>2</sub>O<sub>5</sub>; Nitrochalk and Granular Superphosphate. Each manure provided 0.5 cwt N and 0.53 cwt P<sub>2</sub>O<sub>5</sub> per acre.

Method of placement: Broadcast; Combine drilled.

Basal dressing: None.

Cultivations, etc.: Ploughed: Sept 18. Seed drilled at 3½ bushels per acre and all fertilizers applied: Mar 15. Harvested: July 30.  
Variety: Plumage Archer. Previous crop: Linseed.

Standard errors per plot: Grain.

Yield: 2.37 cwt per acre or 11.0% (16 d.f.)  
P<sub>2</sub>O<sub>5</sub> uptake: 0.0180 cwt per acre or 16.0% (16 d.f.)
