## IRRIGATION EXPERIMENT

The 3rd year

The effects of irrigation and nitrogen - Woburn Butt Close 1953.

The cropping comprises four series; three of these in turn carry the crops of a 3-course rotation:-

- 1st year: Early potatoes followed by winter cabbages
- 2nd year: Sugar beet
- 3rd year: Barley

The fourth remains in long term grass for cutting.

System of replication: 3 randomized blocks of 4 plots each, plots being split into two for the application of nitrogen.

Area of each sub plot(acres): Cut grass - 0.0264, remainder - 0.0278.

Area harvested: Cut grass - 0.0165, early potatoes - 0.0155, sugar beet - 0.0176, barley - 0.0168.

Treatments: All combinations of:-

Whole plots. Irrigation:-

	Cut grass	Early potatoes, Barley and Sugar beet.
O	None	None
C	Full irrigation	Full irrigation to maintain deficit at 1".
B	2/3 of C	None till mid-season then as C.
A	1/3 of C	As C till mid-season then none.

The actual amounts are given below.

Sub plots. Nitrogen: 2 levels applied to crops as below.

(2) On barley 0 = B.

Levels of nitrogen (in addition to N in basal dressing):

cwt per acre

Early potatoes	None;	0.5	Applied as sulphate of ammonia
Winter cabbages (after potatoes)	0.5;	1.0	Applied as nitrochalk
Sugar beet	None;	0.4	Applied as nitrochalk
Barley	None;	0.2	Applied as nitrochalk
Cut grass	0.15;	0.30	Applied as nitrochalk in spring after each cut except the last.

Basal dressing: cwt per acre

As compound fertilizer

	N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O	Salt
Early potatoes	0.5	0.5	0.75	None
Winter cabbages (after potatoes)		None		None
Sugar beet	0.4	0.4	0.6	5.0
Barley	0.2	0.2	0.3	None
Cut grass (yearly)		0.6	0.6	None

In addition 18 cwt carbonate of lime per acre was applied after early potatoes.

N.B. Erratum to 52/Bg/1.2. 'Basal manurings: cwt per acre' under 'salt' for sugar beet read '5.0' instead of 'none', and for barley read 'none' instead of '5.0'.
