WOBURN MARKET GARDEN EXPERIMENT

Organic manures and N - Lansome 1954 the 13th year.

The present cropping comprises two series, each carrying in turn the crops of a two course rotation: 1st year - Globe beet followed by spring cabbages; 2nd year - Leeks.

Note: The results for the spring cabbages 1954-55 will be included in the 1955 report.

System of replication (each series): 4 randomized blocks of 10 plots each, certain interactions being confounded with block differences.

Area of each plot: 0.0125 acre.

Treatments applied to each crop:

Organic manures: Dung; sewage sludge compost; sewage sludge (West Middlesex); vegetable compost, each at 10 and 20 tons per acre.

N (applied as nitrochalk): None; 0.3 cwt per acre on plots receiving organic manure. None; 0.3; 0.6; 0.9 cwt per acre on plots not receiving organic manure. The last two rates are applied in two equal dressings.

Basal manuring per acre to each crop: 0.3 cwt P₂O₅; 0.3 cwt K₂O, applied as granular fertilizer (13% P₂O₅; 13% K₂O).

Cultivations, etc.:

Globe beet. Organic manures applied and ploughed in: Mar 31. Nitrochalk and basal fertilizers applied: May 10. Seed drilled at 13 lb per acre: May 11. Singled: June 16. Second dressing of nitrochalk: June 25. Sprayed with systemic insecticide: June 21. Harvested: Aug 13 - Sept 21. Variety: Detroit.

Leeks. Organic manures applied and ploughed in: July 22. Nitrochalk and basal fertilizers applied: July 27. Planted: Aug 3. Second dressing of nitrochalk applied: Sept 22. Harvested: Mar 8 - 31, 1955. Variety: Musselburgh.

Standard errors per plot.

Globe beet, saleable bulbs: 1.15 tons per acre or 17.3% (17 d.f.)
Leeks, saleable produce: 0.316 tons per acre or 10.8% (17 d.f.)

54/Bf/1.2

Summary of Results

Globe Beet

Organic manures	Level of manuring tons per acre	N: cwt per acre				Mean
		None	0.3	0.6	0.9	
Saleable bulbs: tons per acre						
			(±0.813)			(±0.575)
