WHEAT AND BARLEY - WOBURN STACKYARD 1959

For history, treatments, etc., see "Details of the Classical and Long Term Experiments" 1956.

Strip cropping 1959: To investigate the residual effects of early manures, winter wheat and spring barley were sown in strips across these two experiments. Yields were estimated from sample combine cuts.

Cultivations, etc.: The site of the Continuous Wheat was ploughed on May 28 and Sept 26, 1958 and that of the Continuous Barley on May 27 and Oct 28.

Wheat: Seed drilled at 3 bushels per acre: Dec 5. 'Nitra-Shell' (20.5% N) applied at $4\frac{1}{2}$ cwt per acre: Mar 25, 1959. Sprayed with TCB/MCPA at 4 pints in 40 gallons per acre: Apr 29. Combine harvested: Aug 20. Variety: Squarehead's Master 13/4.

Barley: Seed drilled at 3 bushels per acre: Mar 16, 1959. 'Nitra-Shell' (20.5% N) applied at $4\frac{1}{2}$ cwt per acre: Mar 25. Sprayed with TCB/MCPA at 4 pints in 40 gallons per acre: May 11. Combine harvested: Aug 19. Variety: Plumage Archer.
