POTATOES

The control of blight (Phytophthora infestans) by copper and tin fungicides - Great Field II 1959.

Design: 3 randomized blocks of 5 plots each.

Area of each plot: 0.0096 acres. Area harvested: 0.0013 acres.

Treatments.

Unsprayed (0).

Sprayed twice with white oil formulation of copper oxychloride at 120 fluid oz in 60 gallons per acre (1).

Sprayed twice with 0.1% (2); 0.3% (3); 0.6% (4) triphenyltin acetate at 60 gallons per acre.

Basal dressing: 10 cwt compound fertilizer (10% N, 10% P<sub>2</sub>O<sub>5</sub>, 18% K<sub>2</sub>O) per acre.

Cultivations, etc.: Ploughed twice: Oct 27, 1958 and Feb 20, 1959.

Basal fertilizer applied: Mar 31. Ridged, potatoes machine planted: Apr 1. Earthed up: June 18. Fungicide treatments applied twice: Aug 11 and Sept 2. Sprayed with sulphuric acid, 15% BOV, 100 gallons per acre: Sept 30. Lifted: Oct 13.

Variety: Ulster Supreme. Previous crop: Barley.

Standard error per plot.

Total tubers: 1.940 tons per acre or 20.2% (8 d.f.)

Note: Commencing in August estimates were made at 10 day intervals of incidence of blight and of defoliation.

Summary of Results

0	1	Spray 2	3	4	Mean
<u>Total tubers: tons per acre</u>					
9.58	8.10	9.87 (±1.120)	10.30	10.21	9.64
<u>Percentage ware (1½" riddle)</u>					
83.3	87.5	83.2	89.2	91.6	87.0
