## N FIXATION

(69/R/CS/27 and 69/W/CS/31)

Nitrogen fixation by lucerne - Rothamsted (R) Pastures and Woburn (W) Stackyard B, 1969, the second year. For treatments and the previous year's results see 'Results' 68/C/26.

Area of each sub plot: 0.0011. Area harvested: 0.0006.

The M treatment did not receive ground chalk on either field in 1969.

NOTE: (1) It was decided to discontinue both experiments after the second cut, since yields from lucerne plots were very largely of annual grass.

On Pastures (R), hot dry weather then discouraged all weeds and lucerne grew vigorously. To obtain an estimate of maximum yields from this field a third and fourth cut were therefore taken, using a selection of the best sub-plots - all of the effectively inoculated treatments (E) and the four uninoculated treatments (O) in Block 2 only.

### Cultivations, etc.:-

Pastures (R): PK and 'Nitro-Chalk' applied: 25 Mar, 1969. Cut twice: 22 May, 3 July. 'Nitro-Chalk' applied after first cut. Selected sub-plots cut twice 13 Aug, 6 Oct. 'Nitro-Chalk' applied on 13 Aug.

Stackyard B (W): PK and 'Nitro-Chalk' applied: 26 Mar, 1969. Cut twice: 20 May, 1 July. 'Nitro-Chalk' applied after first cut.

NOTE: (2) The dry matter samples were used for N analyses.
