ALDICARB AND CROP HEALTH

Object: To study the yield and incidence of viruses and stem eelworm in two varieties of field beans grown with and without aldicarb in 1972 and the effects of fresh treatment in 1973 - Great Knott II.

Sponsors: A.J. Cockbain, D.J. Hooper, J. McEwen.

Design: 3 randomised blocks of 4 plots, split into 2.

- NOTES: (1) Adult weevil damage was assessed on 4 May and populations on 14 June. Incidence of viruses was assessed on 25 May, 29 June and 24 July.
(2) Counts of stems showing symptoms of attack by stem eelworm were made in August on the variety Maris Bead.
