POTATOES

SEED HEALTH

Object: To study the effects of three amounts of pest and disease control on two potato varieties grown for seed - Whittlocks.

Sponsors: R.W. Gibson, R. Harrington, G.A. Hide, G.R. Cayley.

Design: 2 randomised blocks of 3 plots split into 6 plus 1 plot split into 4.

Whole plot dimensions: 108.0 x 7.62.

Treatments: All combinations of:-

Whole plots

1. VARIETY Varieties:

> Rothamsted once-grown King Edward R EDWARD

S EDWARD Scots F.S. King Edward S PIPER Scots F.S. Maris Piper

Sub plots

2. PATHCONT Pest and pathogen control (in addition to basals)

cumulative to 1984 for Rothamsted seed:

STANDARD

ENHANCED Seed treatment with tolclofos methyl at 0.24 kg and imazalil at 0.010 kg per tonne of tubers, applied by hydraulic and uncharged electrostatic sprayers respectively. Cypermethrin at 0.04 kg with 7.0 1

oil in 500 l applied by hydraulic sprayer on 14 June, 1985. Plants with 'virus' symptoms were

removed on 4 June and 25 June

FULL As for ENHANCED plus:-

> The imazalil was applied by charged electrostatic sprayer. Cypermethrin at 0.04 kg with oil at 7.0 1 in 500 1 was also applied on 28 June,

11 July, 26 July and (to HAULM D LATER plots only) 14 Aug

3. HAULM D Dates of destroying haulm and of lifting:

EARLY Haulm mechanically destroyed, 12 Aug, 1985. Haulm desiccant applied 14 Aug and potatoes lifted

18 Sept

LATER Haulm mechanically destroyed 4 Sept. Haulm

desiccant applied 5 Sept and potatoes lifted

11 Oct

Plus one whole plot of Rothamsted once-grown Maris Piper divided for all combinations of:-

85/R/P/3

PTHCT RP Pest and pathogen control, as above:

ENHANCED FULL

2. HLM D RP Dates of destroying haulm and of lifting, as above:

EARLY

NOTE: PATHCONT FULL provided for removal of plants with 'blackleg' symptoms. This was done in 1984 but not in 1985 because symptoms were not found.

Basal applications: Manures: (0:18:36) at 690 kg. FYM at 35 t. (10:10:15+4.5 Mg) at 1960 kg. Weedkillers: Paraquat at 0.60 kg ion in 250 l. Linuron at 1.3 kg with paraquat at 0.50 kg ion in 200 l. Fungicide: Mancozeb at 1.4 kg in 200 l on five occasions, applied with the pirimicarb on all but the first. Insecticides: Phorate at 1.7 kg. Pirimicarb at 0.14 kg on four occasions. Haulm desiccant: Diquat at 0.80 kg ion in 500 l.

Cultivations, etc.:- Paraquat applied: 19 Sept, 1984. PK applied: 10 Oct. FYM applied: 27 Nov. Ploughed: 6 Dec. Heavy springtine cultivated: 19 Mar, 1985. NPK Mg applied: 3 Apr. Rotary harrowed: 10 Apr. Potatoes planted by hand, phorate applied: 15 Apr. Linuron and paraquat applied: 16 May. Mancozeb applied: 20 June. Mancozeb with pirimicarb applied: 3 July, 23 July, 6 Aug and 21 Aug. Previous crops: W. barley 1983, w. oilseed rape 1984.

NOTE: Aphid counts were made and virus infection assessed throughout the season. Plants were sampled in early August for stem infections and tuber samples were taken at harvest for observations on storage diseases.
