WINTER WHEAT

PERSISTENCE OF APHICIDES

Object: To examine the persistence of aphicides applied at three growth stages and their effect on the yield of winter wheat - New Zealand.

Sponsor: N. Carter.

Design: 4 randomised blocks of 15 plots.

Whole plot dimensions: 3.0 x 12.0.

Treatments: All combinations of:-

1. APHICIDE      Aphicides (applied in 200 l):  
    DEMETON      Demeton-S-methyl at 0.122 kg  
    DIMETHOEA    Dimethoate at 0.335 kg  
    PIRIMICA      Pirimicarb at 0.140 kg  
    PIR+CLO      Pirimicarb at 0.140 kg + clopythrin at 0.0075 kg
2. APH TIME      Timing of aphicides:  
    GS 45          Booting, growth stage 45 on 11 June, 1986  
    GS 59          Ears emerged, growth stage 59 on 18 June  
    GS 71          Flowering complete, growth stage 71 on 1 July

plus one extra treatment:

EXTRA

NONE            No aphicide (triplicated)

Basal applications: Manures: 'Nitram' at 600 kg. Weedkillers: Paraquat at 0.60 kg ion in 200 l. Clopyralid at 0.07 kg and bromoxynil octanoate at 0.34 kg with mecoprop at 2.5 kg, isoproturon at 2.1 kg applied with the prochloraz and carbendazim in 200 l. Fungicides: Prochloraz at 0.40 kg and carbendazim at 0.15 kg. Carbendazim and maneb (as 'Septal' at 2.5 kg) with propiconazole at 0.12 kg in 200 l. Insecticide: Cypermethrin at 0.025 kg in 200 l.

Seed: Avalon, sown at 190 kg.

Cultivations, etc.: - Heavy spring-tine cultivated: 30 Aug, 1985. Paraquat applied: 24 Sept. Heavy spring-tine cultivated, rotary harrowed, seed sown: 1 Oct. Insecticide applied: 31 Oct. N applied: 29 Mar, 1986. Remaining weedkillers with prochloraz and carbendazim applied: 30 Apr. Carbendazim, maneb and propiconazole applied: 26 June. Combine harvested: 21 Aug. Previous crops: W. wheat 1984, w. oats 1985.

NOTE: Aphids were counted at weekly intervals from early June to mid-August.
