21/R/HB/2 HOOSFIELD SPRING BARLEY (Hoosfield)

Object: To study the effects of organic manures and inorganic fertilizers on continuous spring barley. From 1968 to 1978 a rotation of potatoes, beans and spring barley was practised on parts of the experiment. The rotation was discontinued in 1979 and the whole experiment reverted to continuous spring barley. The experiment was modified for 2003. The main plots continue as previously. The Silicate Test plots continue but are not split to test rates of N (basal N is applied). The remaining plots are to be used to study the effect on yield of P residues (basal N applied).

The 170th year, spring barley.

For previous years see 'Details' 1967 and 1973, Station Report for 1966 and Yield Books for 74-20/R/HB/2.

Main plots

Treatments:

Whole plots

^(a) Plots 63 and 73 started in 2001

- Form of N: A, sulphate of ammonia to supply 48 kg N
- P: 35 kg P as triple superphosphate in 1974 and from 1988 to 2002, single superphosphate in other years
- (P): (none) under review
- P2: 44 kg P as triple superphosphate since 2001
- K: 90 kg K as sulphate of potash
- (Na): (none), 16 kg Na as sulphate of soda until 1973
- Mg: 35 kg Mg as kieserite every third year since 1974 (applied at 30 kg in 1992, 1995 and 1998) (sulphate of magnesia annually until 1973). Annually at 35 kg Mg to new plot 63.
- (Mg): (none) under review
- D1852: Farmyard manure at 35 t (fresh weight) since 1852
- D2001: Farmyard manure at 35 t (fresh weight) since 2001
- (D): Farmyard manure at 35 t (fresh weight) 1852 – 1871 only
- (Ashes): Weed ash 1852-1916, furnace ash 1917-1932, none since

Sub-Plots

- (2) N Nitrogen fertilizer (kg N), as 'Nitro-Chalk', since 1968 (cumulative N applications until 1973, on a cyclic system since 1974): 0, 48, 96, 144

Silicate Test plots

Treatments:

NPKSS	433	PK(Na)MgSi	-	N3 (P)K(Mg) Si

N: From 1852-1966 whole plots received 48 kg N as nitrate of soda. Between 1968-2002 whole plots were split to test 4 rates of N as "Nitro-chalk" (cumulative applications until 1973, on a cyclic system from 1974).

N3: Basal N, 144 kg as "Nitro-chalk" since 2003

Si: Silicate of soda at 450 kg (Note: S also refers to silicate of soda)

(Si): Silicate of soda omitted since 1980

P, (P), K, Mg, (Mg), (Na): as above

Phosphorus Test plots

Treatments:

Since 2003 the remaining plots [ex-Castor meal (plots 14, 24, 34 & 44) and those testing combinations of NPK with and without Mg (Strip 5 plots 55, 56, 57 & 58)] have been used to study the effect of P residues on yield. Previous treatments have resulted in different levels of available P in the soil. Large dressings of K were applied to some plots to increase levels of exchangeable K in the soil such that K should not limit yield; plots 141 and 241 were sacrificed and used as discard areas so that the K application did not encroach on adjacent no K plots on the Silicate Test. Other plots received the normal rate of K. The level of exchangeable Mg in the soil is such that Mg should not limit yield; the need to apply Mg was reviewed for 2017.
